SPECIFICATION AMENDMENTS:

Please amend the paragraph beginning at page 4, line 20 as follows:

"A specific example of the software wrapper 16 and enumerations 18 for the Java™
programming language is shown in FIG. 2. The wrapper implementation ~~18~~ 16 provides an
enumeration application program interface (API) and a collection API to software
applications using the underlying enumerations 18. More specifically, the enumeration API
can be the java.util.Enumeration API and the collection API can be the java.util.Collection
API. The Enterprise Java Beans (EJB) 1.1 specification has deprecated use of the
java.util.Enumeration API in favor of the java.util.Collection API."

Ext note ——————>
Ext Please retyped   5
Please amend the paragraph beginning at page 9, line 4 as follows:

"FIG. 3 shows a flow chart 50 describing the operation of the wrapper 16. The
wrapper implementation ~~18~~ 16 implements both the collection and enumeration APIs. When
the wrapper 16 receives a call on the enumeration API, it delegates directly to the existing
enumeration implementation class instance (step 54). In the enumeration interface methods,
the implementation ~~18~~ 16 delegates to the original implementation."
